

I would not take back for one second the money we spent and the expertise that Design 2020 gave to us. People met with God because our audio, video, and lighting was a tool that helped them 'connect' and not a distraction.

-Paxton Whatley - Pastor of Worship

Trinity Fellowship, Pampa, TX

Founded by Pastor Lonny Robbins, Trinity Fellowship in Pampa, Texas is a growing, contemporary congregation seeking to "reach the city" with the gospel. Due to its growth, Trinity was in need of a larger space to support its worship services and family ministries. After acquiring an existing building on Hobart Street in downtown Pampa, Trinity contracted with Design 2020 through its architect, HH Architects of Dallas, TX. Design 2020 was charged with developing the audio, projection, and lighting systems as well as the acoustics and sound isolation of the renovated retail space.

Design 2020 worked with HH Architects to develop a Sanctuary and a "Kids' Auditorium" with controlled performance acoustics and integral sound isolation and noise control strategies. The new 600-seat

sanctuary contains a state-of-the-art audio system including a digital audio console, EAW loudspeakers and QSC amplification. An ETC Sensor dimming system supports the full building, with zoned architectural controls. Projection and audio are present throughout the facility.

The congregation has doubled in size from the day of the opening service. Paxton Whatley, Trinity's Pastor of Worship had nothing but praise for the work of Design 2020: "Praise God for Design 2020! They helped us bring forth the Kingdom!"

Following the success of the Sanctuary and Kid's auditoriums, Trinity has recently contracted Design 2020 to develop systems for a youth facility in a new portion of the Pampa campus.
